

BOBBY KHAN

AGILE DELIVERY LEAD · TRANSFORMATION & REGULATED DELIVERY

St Ives, NSW 2075 · +61 410 529 055 · khan.bobby@me.com · [linkedin.com/in/khanbobby](https://www.linkedin.com/in/khanbobby) · Australian Citizen

PROFESSIONAL SUMMARY

Senior delivery and transformation leader with 20+ years across Financial Services, Management Consulting, and Retail, delivering complex technology, data migration, CRM, and regulatory compliance programs (\$1.7M–\$18M capex) on time and on budget for ASX 200 organisations including Westpac, Perpetual, and Bank of Queensland.

Leads multi-squad Agile delivery and builds high-performing teams — coaching members, running Agile ceremonies, coordinating cross-team dependencies, and driving continuous improvement — with deep expertise in financial services regulation, stakeholder engagement at C-suite, and operating model design.

Champions innovation and efficiency, most recently through hands-on AI-augmented delivery (independent work): routing frontier AI models to produce first-draft artefacts for human review, compressing analyse–build–test effort while keeping human judgement in control.

AI-AUGMENTED DELIVERY

Hands-on use of frontier AI to accelerate delivery work, with human judgement owning every decision:

- **Business analysis:** AI drafts first-pass requirements, user stories and personas from source material for analyst review — compressing the analysis phase while a human owns the call.
- **Process analysis:** AI maps current/future-state processes and surfaces gaps, controls and rework from documents and interviews — accelerating process design.
- **Research & synthesis:** AI runs deep research and synthesises regulation, market and solution options into citation-anchored first drafts for the team to validate.
- **Governance:** human-in-the-loop AI governance — senior review, traceable provenance and validation gates keep AI output auditable and accountable.

Proven end-to-end as an AI-augmented delivery case study (Cheetah Squad PPP) — detailed at the end of this CV.

CORE COMPETENCIES

Agile Delivery Leadership (multi-squad) | Full-Lifecycle Delivery — Design → Build → Test → Release (SDLC) | Team Coaching & People Leadership | Continuous Improvement | Delivery Risk & Dependency Management | Capacity & Resource Planning | Stakeholder Management (C-Suite) | Regulated Lifecycle Delivery (DDO, Anti-Hawking, NCCP, BCOP) | Business & Process Analysis | CRM Implementation (Salesforce) | Change Management | Business Case Development, Budgeting &

Forecasting | Vendor & Partner Management | Operating Model Design | AI-Augmented Delivery & Governance (human-in-the-loop) | Prompt Engineering & Model Routing | Financial Analysis & Modelling |

TOOLS & TECHNOLOGY

Salesforce CRM | Microsoft 365 | Jira | Confluence | Power BI | Advanced Excel & Financial Modelling | Azure DevOps | Adobe Experience Manager | Frontier AI Models (Claude, Gemini) | GitHub | Google Sheets API

PROFESSIONAL EXPERIENCE

Perpetual Wealth Management — Delivery Lead May 2025 – Mar 2026

Contract engagement — \$1.7M CRM transformation across an acquired business entity

- Secured funding by developing a business case.
- Recruited and led a team of Business Analyst, Salesforce Architect, Data Architect and Testers.
- Defined and documented end-to-end business requirements, engaging stakeholders across the newly acquired entity to ensure solution fit.
- Designed, built, and tested the CRM solution, which went live successfully.
- Managed delivery within budget, maintaining scope integrity across a complex multi-entity data migration.
- Managed daily scrums, RAID, user story supervision, test plan, and other project deliverables.
- Coached business analysts and developers to lift analysis and build quality, reducing rework and improving delivery efficiency.
- Ran bi-weekly sprint retrospectives to drive continuous improvement, improving how limited SME time was used.

AI METHOD The entity had no CX function to design customer journeys. I would feed customer and product data to AI agents to generate draft personas, then use the agents to produce first-draft CX journey designs for human review — creating customer-experience capability from existing resources without standing up a new team.

Outcome: CX design capability unlocked at marginal cost; more value from the resources already on the program.

AI METHOD Training materials were out of date. I would feed AI agents the existing solution landscape, the new solution architecture, business requirements, and screen flows, and have them produce first-draft training and change-management material for human review — significantly fast-tracking change-artefact creation.

Outcome: change-management artefacts produced in a fraction of the usual time, accelerating user readiness and go-live.

Westpac Banking Corporation — Program Manager / Strategy Service Owner / Business Design Lead

May 2021 – Sep 2024

Regulatory compliance, strategy, and business design across Consumer and Business Banking (\$10M–\$18M capex)

- Led delivery of Design & Distribution Obligation (DDO) regulatory solution across 10+ technology systems for Consumer Products (Deposits, Credit Cards, Personal Loans, Home Loan Variation), distributed digitally — \$18M capex, delivered on time and on budget (Sep 2021).
- Led CRM systems uplift for Business Distribution to embed Anti-Hawking compliance (~\$7M capex), delivering all key compliance items on time and on budget.
- Applied Agile delivery practices across multi-squad programs — daily scrums, RAID management, user story governance, and integrated test planning across 10+ technology systems.
- Developed business case to build Digital ID capabilities targeting non-interest income growth; successfully secured funding for discovery phase.
- Led analysis of market share loss drivers for Consumer Finance products (\$1.5B+ asset base).
- Managed Consumer Finance FY25 BSR submission (~\$110M annual capex) through to March 2024.
- Developed prioritisation framework for Program UNITE technology simplification (capex ~\$2B over 5 years), consolidating 180+ tech platforms into fewer than 60.
- Coached squad members and business analysts across the program to raise requirements and engineering quality, cutting downstream rework.
- Embedded continuous improvement through regular sprint retrospectives, sharpening SME engagement and squad throughput.

AI METHOD On a DDO-shape program, I would have AI analyse Product Disclosure Statements and target market determinations to produce first-draft solution architecture — data flows, control points, distribution-channel obligations — for human review. This compresses regulatory interpretation, the slowest phase of any compliance program.

Outcome: faster, on-budget delivery; interpretation effort cut from weeks to days.

AI METHOD On an Anti-Hawking-shape program, I would have AI design first-draft compliance alerts — (a) data required, (b) trigger logic, (c) synthetic test scenarios — for human review. This compresses alert design and test build, the parts that usually threaten go-live dates.

Outcome: alert design and testing accelerated, protecting go-live on time, budget, and quality.

Woolworths Group — Strategy Consultant, Transformation

Sep 2020 – Apr 2021

- Conducted diagnostic review of \$150M annual contract labour spend, identifying ~\$15M in savings across 5 key initiatives.

Bank of Queensland — Head of Strategy, Business Bank

Sep 2019 – Sep 2020

- Identified ~\$1B growth opportunity in Asset Finance over 5 years through digital capability and operating model uplift targeting the SME segment (\$1M–\$50M revenue).
- Designed strategy for BoQ to grow in Accounting Services, targeting \$700M+ incremental lending footing over 5 years.
- Devised and presented business case to upgrade and consolidate core leasing platforms, securing approval for Discovery & Detailed Design phase.
- Prepared multiple Board papers on business progress and risk reviews.

Accenture Consulting — Senior Manager

Sep 2017 – Aug 2019

- Led Business Engagement stream for Banking Code of Practice (BCOP) reporting implementation — delivered stakeholder alignment and on-time regulatory compliance.
- Led Process Design stream for post-acquisition business integration data migration, optimising synergy realisation.
- Led Business Analysis stream for Responsible Lending / NCCP compliance, capturing requirements and developing functional specification for technology-enabled lending controls in home loan origination platforms.
- Led global feasibility study for Big Data / machine learning initiative, building a prototype for proactive customer engagement in Australian banking — enabling Accenture to localise the capability.
- Developed \$40M sales pipeline through client relationship management.

Westpac Banking Corporation — Senior Manager, Portfolio Development

Sep 2014 – Aug 2017

Drove growth strategy and business transformation across the end-to-end customer journey (Origination, Credit, Onboarding) for Asset Finance

- Led cross-sell initiative for operating lease product, generating \$75M in new business in FY15.
- Led margin improvement initiative achieving 13% uplift in Return on Tangible Equity.
- Delivered onboarding process transformation, improving Time to Cash by 30%.
- Relieved Head of role for 6 weeks, managing team and stakeholders across Customer Complaints, Risk, and Credit.

Transport for NSW — Consultant

Mar 2014 – Jul 2014

- Delivered recommendations to reduce third-party spend by 10%.

Xchanging / DXC — Head of Commercial and Strategy

Jul 2010 – Dec 2013

- Devised business case to replace core IT platform, presented to global CEO, resulting in 7% margin improvement.
- Achieved 10% discount on buy price for \$30M M&A transaction.
- Identified and mitigated commercial risks in legal documentation (SPAs, transaction contracts, NDAs).
- Structured complex outsourcing transaction pricing ensuring commercial sustainability.

Westpac Banking Corporation — Manager, Strategy & Transaction

Jul 2006 – Jun 2010

- Devised offshoring strategy business case, securing Board approval to offshore non-core processes and improve cost-income ratio.
- Conducted counter-party due diligence on \$500M revenue base to mitigate supplier risk.
- Conducted pricing analysis for \$10M+ outsourcing deal, contributing to 5% savings in negotiation.
- Diagnostic study of call centre, contingent labour, and professional services spend — average 12% savings identified.
- Ran RFP and vendor negotiation for Basel II data warehouse outsourcing, achieving 15% savings.

Country Energy — Analyst, Corporate Finance

Jan 2005 – Jun 2006

- Devised business plan for broadband services diversification, identifying 6% revenue upside from Telco.
- Post-implementation review identified 4% margin improvement opportunity.

Telenor — Deputy Manager, Commercial Strategy

Jan 2000 – Dec 2002

- Devised US\$175M business case for international gateway entry, resulting in 4% regional revenue uplift for Telenor.

AI-AUGMENTED DELIVERY CASE STUDY — CHEETAH SQUAD PPP

A case study in delivering faster with AI while keeping full control — using Cheetah Squad PPP, a predictive performance platform (Apr 2026 – Present), as the vehicle.

ACCELERATORS

A repeatable loop where AI accelerates each stage and a human owns the gate between them: Research (AI surfaces the critical concepts, evidence and trends → human confirms relevance and sets the business outcome per spec) → Analysis & Design (AI drafts business analysis and solution/algorithm design → human pressure-tests for accuracy) → Build & Test (AI builds and tests → human validates the results) → Deploy.

METHODOLOGY

Spec-driven delivery: a canonical ARCHITECTURE document is the single source of truth and change gate, with a To Do document holding scope, used to plan each increment and sprint. No change ships without an ARCHITECTURE-and-scope diff in the same pull request — keeping work small, sequenced and traceable.

GOVERNANCE

Human-in-the-loop as the control, not a step: senior judgement owns and signs off every decision. AI output is validated by a 45+ test automated safety harness before release and kept citation-anchored, so every contribution is traceable and auditable.

TOOLS

Claude Opus (reasoning, architecture, code review) and Gemini Pro (research), with explicit model routing for cost and task fit; GitHub Codespaces with version-controlled repos and sprint-based PRs; Python / Streamlit; MotherDuck (cloud DuckDB); Google Cloud for authentication.

OUTCOMES

Designed, built and shipped solo to a working MVP in six weeks — more iterations per sprint and change requests absorbed within baseline, with the method proving directly transferable to regulated enterprise delivery. Available to demonstrate on request.
