SYED BOBBY KHAN

PROGRAM MANAGER | AGILE DELIVERY LEAD | TRANSFORMATION & REGULATED DELIVERY

St Ives, NSW 2075 · +61 410 529 055 · khan.bobby@me.com · linkedin.com/in/khanbobby · Australian Citizen

PROFESSIONAL SUMMARY

Senior delivery and transformation leader with 20+ years across Financial Services, Management Consulting, and Retail, delivering complex technology, data migration, CRM, and regulatory compliance programs ($1.7M–$18M capex) on time and on budget for ASX 200 organisations including Westpac, Perpetual, and Bank of Queensland.

Applies a structured program and project management methodology developed within Accenture's global delivery practice, and has spent a full career delivering complex change in highly regulated financial services, including landmark regulatory programs (Design & Distribution Obligation, Anti-Hawking). Strong across full project lifecycle control (scope, schedule, budget, quality, and risk), delivery governance, stakeholder engagement at C-suite, operating model design, vendor management and cross-functional coordination.

Leads multi-squad Agile delivery and builds high-performing teams — coaching members, running Agile ceremonies, coordinating cross-team dependencies, and driving continuous improvement.

Champions innovation and efficiency, most recently through hands-on AI-augmented delivery (independent work): routing frontier AI models to produce first-draft artefacts for human review, compressing analyse–build–test effort while keeping human judgement in control.

AI-AUGMENTED DELIVERY

Hands-on use of frontier AI to accelerate delivery work, with human judgement owning every decision:

- **Business analysis:** AI drafts first-pass requirements, user stories and personas from source material for analyst review — compressing the analysis phase while a human owns the call.
- **Process analysis:** AI maps current/future-state processes and surfaces gaps, controls and rework from documents and interviews — accelerating process design.
- **Research & synthesis:** AI runs deep research and synthesises regulation, market and solution options into citation-anchored first drafts for the team to validate.
- **Governance:** human-in-the-loop AI governance — senior review, traceable provenance and validation gates keep AI output auditable and accountable.

Proven end-to-end as an AI-augmented delivery case study (Cheetah Squad PPP) — detailed at the end of this CV.

CORE COMPETENCIES

Agile Delivery Leadership (multi-squad) | Full-Lifecycle Delivery — Design → Build → Test → Release (SDLC) | Team Coaching & People Leadership | Continuous Improvement | Delivery Risk & Dependency Management | Capacity & Resource Planning | Stakeholder Management (C-Suite) | Regulated Lifecycle Delivery (DDO, Anti-Hawking, NCCP, BCOP) | Business & Process Analysis | CRM Implementation (Salesforce) | Change Management | Business Case Development, Budgeting & Forecasting | Vendor & Partner Management | Operating Model Design | AI-Augmented Delivery &

Governance (human-in-the-loop) | Multi-Agent AI Orchestration | CI/CD & Release Gating (GitHub Actions, AWS) | Prompt Engineering & Model Routing | Financial Analysis & Modelling |

TOOLS & TECHNOLOGY

Salesforce CRM | Microsoft 365 | Microsoft Copilot | Jira | Confluence | Power BI | Advanced Excel & Financial Modelling | Azure DevOps | Adobe Experience Manager | Frontier AI Models (Claude, Gemini) | Claude Code (multi-agent) | GitHub & GitHub Actions (CI/CD) | AWS (App Runner, Lambda, SQS) | Python | FastAPI | MotherDuck / DuckDB | scikit-learn

PROFESSIONAL EXPERIENCE

Perpetual Wealth Management — Delivery Lead

May 2025 – Mar 2026

Contract engagement — $1.7M CRM transformation across an acquired business entity

- Secured funding by developing a business case.
- Recruited and led a team of Business Analysts, Salesforce Architects, Data Architects (for data migration), and Testers.
- Led definition and documentation of end-to-end business requirements, engaging stakeholders across the newly acquired entity to ensure solution fit.
- Led design, build, and test of the CRM solution, which went live successfully.
- Managed 3rd party vendors (BMP Technologies, SMS360, CalendarAnything, Fujitsu, IRESS) for a variety of deliverables.
- Managed delivery within budget, maintaining scope integrity across a complex multi-entity data migration.
- Managed daily scrums, RAID, user story supervision, test plan, and other project deliverables.
- Coached business analysts and developers to lift analysis and build quality, reducing rework and improving delivery efficiency.
- Ran bi-weekly sprint retrospectives to drive continuous improvement, improving how limited SME time was used.

Westpac Banking Corporation — Program Manager / Strategy Service Owner / Business Design Lead

May 2021 – Sep 2024

Regulatory compliance, strategy, and business design across Consumer and Business Banking ($10M–$18M capex)

- Led delivery of Design & Distribution Obligation (DDO) regulatory solution across 10+ technology systems for Consumer Products (Deposits, Credit Cards, Personal Loans, Home Loan Variation), distributed digitally — $18M capex, delivered on time and on budget (Sep 2021).
- Led CRM systems uplift for Business Distribution to embed Anti-Hawking compliance (~$7M capex). Recruited and directed a team of 3 Data Scientists (SAS and Oracle) to build 10 automated compliance-breach alerts for post-go-live monitoring, delivering all key items on time and on budget.
- Applied Agile delivery practices across multi-squad programs — daily scrums, RAID management, user story governance, and integrated test planning across 10+ technology systems.
- Developed business case to build Digital ID capabilities targeting non-interest income growth; successfully secured funding for discovery phase.
- Led analysis of market share loss drivers for Consumer Finance products ($1.5B+ asset base).
- Managed Consumer Finance FY25 BSR submission through to March 2024.

- Developed prioritisation framework for Program UNITE technology simplification (capex ~$2B over 5 years), consolidating 180+ tech platforms into fewer than 60.
- Coached squad members and business analysts across the program to raise requirements and engineering quality, cutting downstream rework.
- Embedded continuous improvement through regular sprint retrospectives, sharpening SME engagement and squad throughput.

Woolworths Group — Strategy Consultant, Transformation Sep 2020 – Apr 2021

- Conducted diagnostic review of $150M annual contract labour spend, identifying ~$15M in savings across 5 key initiatives.

Bank of Queensland — Head of Strategy, Business Bank Sep 2019 – Sep 2020

- Identified ~$1B growth opportunity in Asset Finance over 5 years through digital capability and operating model uplift targeting the SME segment ($1M–$50M revenue).
- Designed strategy for BoQ to grow in Accounting Services, targeting $700M+ incremental lending footing over 5 years.
- Devised and presented business case to upgrade and consolidate core leasing platforms, securing approval for Discovery & Detailed Design phase.
- Prepared multiple Board papers on business progress and risk reviews.

Accenture Consulting — Senior Manager Sep 2017 – Aug 2019

- Led Business Engagement stream for Banking Code of Practice (BCOP) reporting implementation — delivered stakeholder alignment and on-time regulatory compliance.
- Led Process Design stream for post-acquisition business integration data migration, optimising synergy realisation.
- Led Business Analysis stream for Responsible Lending / NCCP compliance, capturing requirements and developing functional specification for technology-enabled lending controls in home loan origination platforms.
- Led global feasibility study for Big Data / machine learning initiative, building a prototype for proactive customer engagement in Australian banking — enabling Accenture to localise the capability.
- Developed $40M sales pipeline through client relationship management.

Westpac Banking Corporation — Senior Manager, Portfolio Development Sep 2014 – Aug 2017

Drove growth strategy and business transformation across the end-to-end customer journey (Origination, Credit, Onboarding) for Asset Finance

- Led cross-sell initiative for operating lease product, generating $75M in new business in FY15.
- Led margin improvement initiative achieving 13% uplift in Return on Tangible Equity.
- Delivered onboarding process transformation, improving Time to Cash by 30%.
- Relieved Head of role for 6 weeks, managing team and stakeholders across Customer Complaints, Risk, and Credit.

Transport for NSW — Consultant Mar 2014 – Jul 2014

- Delivered recommendations to reduce third-party spend by 10%.

Xchanging / DXC — Head of Commercial and Strategy Jul 2010 – Dec 2013

- Devised business case to replace core IT platform, presented to global CEO, resulting in 7% margin improvement.
- Achieved 10% discount on buy price for $30M M&A transaction.
- Identified and mitigated commercial risks in legal documentation (SPAs, transaction contracts, NDAs).

- Structured complex outsourcing transaction pricing ensuring commercial sustainability.

Westpac Banking Corporation — Manager, Strategy & Transaction Jul 2006 – Jun 2010

- Devised offshoring strategy business case, securing Board approval to offshore non-core processes and improve cost-income ratio.
- Conducted counter-party due diligence on $500M revenue base to mitigate supplier risk.
- Conducted pricing analysis for $10M+ outsourcing deal, contributing to 5% savings in negotiation.
- Diagnostic study of call centre, contingent labour, and professional services spend — average 12% savings identified.
- Ran RFP and vendor negotiation for Basel II data warehouse outsourcing, achieving 15% savings.

Country Energy — Analyst, Corporate Finance Jan 2005 – Jun 2006

- Devised business plan for broadband services diversification, identifying 6% revenue upside from Telco.
- Post-implementation review identified 4% margin improvement opportunity.

Telenor — Deputy Manager, Commercial Strategy Jan 2000 – Dec 2002

- Devised US$175M business case for international gateway entry, resulting in 4% regional revenue uplift for Telenor.

AI-AUGMENTED DELIVERY CASE STUDY — CHEETAH SQUAD PPP

A case study in delivering faster with AI while keeping full control — using Cheetah Squad PPP, a predictive performance platform (Apr 2026 – Present), as the vehicle.

> **METHOD**
> A repeatable loop where AI accelerates each stage and a human owns the gate between them: Research → Analysis & Design → Build & Test → Deploy. Spec-driven: a canonical ARCHITECTURE document is the single source of truth and change gate, and no change ships without an architecture-and-scope diff in the same pull request. Each sprint runs as a squad of parallel cloud AI agents working to a written brief and a declared file scope, with a local lead session as integrator and release gate. A living Learning document, updated at every sprint close and now past 100 revisions, records each mistake and its fix as a rule that every later session works from, so the same error is not made twice.

> **GOVERNANCE & ACCURACY**
> Human-in-the-loop as the control: senior judgement signs off every decision, and AI output is treated as a claim until something checks it. Facts are re-measured from the live source, not carried from memory, and anything unchecked is labelled unverified. Calculations are reconciled against an established reference platform on real data, and outside research is graded for evidence quality before it informs a decision. Work is reported done only on a check that ran, every bug fix leaves a test that failed before it, and integrations are tested live, not only against mocks. Testing runs at every level: system testing (end-to-end app and API tests, plus smoke tests against the live service after each deploy), system integration testing (every API route outside a sprint's scope must return exactly what the live baseline returns), and regression testing (~3,500 automated tests across 260 suites, with a pass-count floor that a change may not drop below). A pre-commit gate and a CI gate on every merge block any failing change; changelog, architecture and validation logs keep every figure traceable.

> **TOKEN EFFICIENCY**
> AI usage is managed as a delivery cost, cutting tokens without cutting quality. Each task orients from a knowledge graph of the codebase instead of reading whole files; the frontier model keeps the judgement work while bulk reading, triage and research go to Gemini or a single subagent that returns only its conclusion; recurring rituals are codified as skills so no session re-learns context; one live measurement replaces guess-fix-redeploy cycles; and tests and the release gate run locally at no token cost. Verification and security checks are never cut to save tokens.

CUSTOMER JOURNEY PROTOTYPE

A clickable prototype of an omnichannel customer journey, so riders get the same experience on native iOS and Android (phone and tablet) and on the web: 111 screens across 10 flows, in Day and Night versions, with every button working one tap deep. The information architecture was refined over successive rounds and checked against outside evidence through Gemini deep research. Each flow was built by its own AI session and passed a chain of design skills (usability, iOS and Android conventions, adaptive layout, OKLCH colour, WCAG contrast and colour-blind checks, design critique, accessibility review), from one locked palette enforced by an automated check. A single token-driven design system generates Swift, Kotlin and TypeScript so SwiftUI, Jetpack Compose and React front ends look and behave the same. Available to demonstrate on request.

DATA & MACHINE LEARNING

MotherDuck (serverless cloud DuckDB) is the data warehouse: one tenant under a versioned schema (25 migrations), with a strict convention for time zones and timing frames, and read access for AI agents through the MotherDuck connector so analysis queries run against live data instead of copies. **Machine learning:** we developed a hybrid approach. A scientific model of how effort, terrain and weather affect speed makes each ride prediction, and a machine learning model (gradient boosting, built in scikit-learn) learns from each rider's own past results to correct it, using only information available before the ride. It is switched on only once it proves more accurate than simple benchmarks (leave-one-out cross-validation and a four-part promotion gate). The trained model is exported as plain data, so the production service carries no ML library and stays lean, and if anything goes wrong it falls back to the scientific model's prediction automatically.

TOOLS & IN-HOUSE TOOLKIT

Claude Opus 5.x via Claude Desktop, Claude Code and scheduled cloud agents; Gemini for research; a codebase knowledge graph; GitHub with PR-only sprint branches; Python, FastAPI, scikit-learn; the Wahoo Cloud API (OAuth 2.0) for pulling rides from riders' devices; AWS App Runner, a Lambda pull worker on an SQS FIFO queue, S3, Secrets Manager and IAM with GitHub OIDC; Google Cloud authentication; Claude Design. Built in-house: **superset** (the operating loop), **sprint-close** (writes the four canonical records to a fixed schema), **new-metric-field** (adds a persisted field end to end without breaking the write chain), three review subagents (documentation drift, data lineage, units and timezones), guard hooks (secrets, schema, compile), and **CI/CD**: a GitHub Actions gate with a test pass-count floor, API contract digest, scope and edited-test checks, plus an in-house **local CI/CD pipeline** that runs the same gate without paid cloud runners and deploys to AWS only a commit that passed it, with smoke tests, a migration safety check and one-command rollback.

OUTCOMES

Designed, built and shipped solo to a working MVP in six weeks, and sustained since: seven months across 1,740 commits and 44 merged sprint pull requests, with a live tester cohort. The core platform (prediction engine, cloud data warehouse, production API on AWS, automatic ride import from Wahoo and sign-in) is complete and live; the native app and web builds are next, working from the finished customer journey prototype. Available to demonstrate on request.

TRANSFER TO ENTERPRISE

The same loop applies to the regulated programs I have delivered. On DDO-shape work, AI drafts solution architecture from Product Disclosure Statements and target market determinations (data flows, control points, distribution obligations) for human review, compressing regulatory interpretation, the slowest phase. On Anti-Hawking-shape work, AI drafts each compliance alert as data required, trigger logic and synthetic test scenarios, so go-live holds on time and on budget.

RECOMMENDATION (PLEASE REFER TO LINKEDIN FOR DETAILS)

- “I knew of Bobby before we ever worked together. He was delivering major programs at Westpac, and I still have plenty of ex senior colleagues who speak highly of him. His name came up more than once as someone who could be handed a hard, complex program and just get it done, on time, without drama. So when I later got to work with Bobby directly on the CRM transformation at Perpetual, it was good to see the reputation held up. Bobby’s an experienced PM who genuinely puts the client first, builds trust fast with stakeholders at every level, and somehow manages to hold the big commercial picture in his head while still catching the details that trip other people up. I would work with Bobby again without a second thought, and I would recommend him to anyone who needs a Senior PM they can actually rely on.” – Matthew Le Belenger, former Lead Partner, Perpetual Wealth Management
- “Bobby took over and delivered the Digital stream Design and Distribution Obligations (DDO) Program which was one of many workstreams of the DDO portfolio. He was always professional in his dealings with stakeholders and always had his sights on the outcomes and meeting the required deadlines. It was a challenging environment with frequent change requirements from business stakeholders, however, with his excellent technical knowledge, Bobby was always able to deliver the required results. Always ready with a cheerful disposition and a can-do attitude. I would be happy to work with Bobby again.” – Raffaella Massaioli, former Portfolio Director, Westpac
- “Bobby is a true professional with well balanced IQ & EQ. Bobby has a natural curiosity which drives him to ask questions that gets to the core issues quickly. He is a clear and lateral thinker, has a solid grasp across the end to end value chain, and prides himself on delivering practical solutions. Bobby’s approach is taken with empathy to the broader team which helps him forge true partnerships. With a strong foundation in strategy and execution, he brings high energy and persistence to deliver meaningful outcomes. I recommend him for his valuable contribution.” – Stewart Creighton, former Head of Strategic Alliance & Op Lease, Westpac Specialist Finance
- “Bobby worked in my sales team. He is an astute commercial manager, has a very solid grasp of technical commercial aspects of large deals and understands and develops sound strategies required to complete deals. He is also very proactive, hard working and always delivers in excess of expectations” – Mark Thompson, former Managing Director, Xchanging Australia
